1) install NGINX on Machine and Configure it to listen on port 8090 then change the default page to custom index.html on machines

```
heba@heba-HP-ProBook-450-G4:~/Sprints-DevOps/Ansible/task1$ ansible-playbook -i inventory.txt nginx.yml

PLAY [Install and configure NGINX] *********************************************************************

TASK [Gathering Facts] *********************************************************************************
ok: [nginx-1]

TASK [Install NGINX] ***********************************************************************************
ok: [nginx-1]

TASK [Configure NGINX] *********************************************************************************
changed: [nginx-1]

TASK [Create custom index.html file] *******************************************************************
changed: [nginx-1]

RUNNING HANDLER [restart nginx] ************************************************************************
changed: [nginx-1]

PLAY RECAP *********************************************************************************************
nginx-1                    : ok=5    changed=3    unreachable=0    failed=0    skipped=0    rescued=0    ignored=0
```

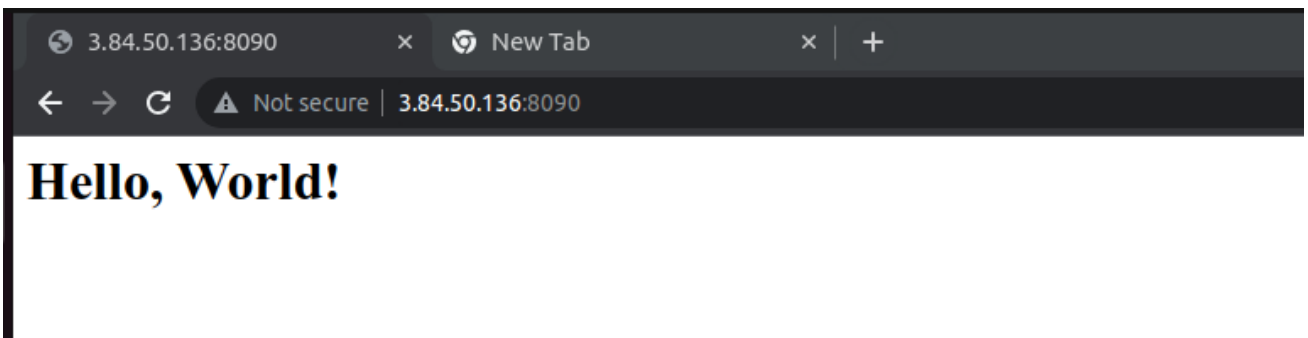

2) Depot your app
https://github.com/sabreensalama/dockerize-node-app-task on the machine
